

### **Suggestion 1:**

**Good attempt in using Marker-based AR utilizing Unity and Vuforia. There could have been more interactive Mixed reality buttons or some simulations**

### **Action done:**

We have added virtual buttons to the models to animate the model on pressed.

### **Suggestion 2:**

**Can implement more practical courses apart from CPR. Improve CPR course by showing how its done in real time.**

### **Action done:**

We are very new to building our 3d models and as most of the good models in the internet are paid. We had to make our some of own models by learning blender. We actually were halfway in building a model for rescue breathing as well but with lack of time and experience we were not able to do it on time.
